

**What is claimed is:**

1. A method for reproducing animation data using an enhanced navigation player, the method comprising:

5 receiving first graphic information comprising control data and animation data associated with audio/video (A/V) data read from a first source;

extracting from the first graphic information, second and third graphic information;

10 decoding the second and third graphic information into first and second image data, respectively; and

reproducing at least one of the first and second image data in the form of animated images, based on the control data.

15 2. The method of claim 1 further comprising extracting first control data from the first graphic information.

3. The method of claim 1 further comprising extracting second control data from the second graphic information.

20

4. The method of claim 1 further comprising extracting third control data from the third graphic information.

5. The method of claim 1, wherein the first graphic  
25 information is a MNG (Multimedia Network Graphics) file.

6. The method of claim 1, wherein the second graphic information is a PNG (Portable Network Graphics) file.

5 7. The method of claim 1, wherein the third graphic information is a JNG (JPEG Network Graphics) file.

8. The method of claim 2, wherein the first control data comprises MNG (Multimedia Network Graphics) control information.

10

9. The method of claim 3, wherein the second control data comprises PNG (Portable Network Graphics) control information.

15 10. The method of claim 4, wherein the third control data comprises JNG (JPEG Network Graphics) control information.

11. The method of claim 1, further comprising:  
extracting first control data from the first graphic  
20 information;

extracting second control data from the second graphic information; and

extracting third control data from the third graphic information,

25 wherein the control data comprises first, second and third

control information.

12. The method of claim 11, wherein:

the first control data comprises MNG (Multimedia Network  
5 Graphics) control information;

the second control data comprises PNG (Portable Network  
Graphics) control information; and

the third control data comprises JNG (JPEG Network  
Graphics) control information.

10

13. The method of claim 11, wherein:

the first graphic information is a MNG (Multimedia Network  
Graphics) file;

the second graphic information is a PNG (Portable Network  
15 Graphics) file; and

the third graphic information is a JNG (JPEG Network  
Graphics) file.

14. A method for reproducing animation data using an  
20 enhanced navigation player, the method comprising:

receiving first graphic information comprising control data  
and animation data associated with audio/video (A/V) data read  
from a first source;

storing the first graphic information in a storage medium;

25 extracting from the first graphic information, second and

third graphic information;

decoding the second and third graphic information into  
first and second image data, respectively;

extracting first, second and third control data from the  
5 first, second and third graphic information, respectively; and

reproducing at least one of the first and second image  
data in the form of animated images, based on the control data,

wherein the control data comprises first, second and third  
control data, wherein the first control data comprises MNG  
10 (Multimedia Network Graphics) control information, the second  
control data comprises PNG (Portable Network Graphics) control  
information, and the third control data comprises JNG (JPEG  
Network Graphics) control information.

15 15. The method of claim 11, wherein:

the first graphic information is a MNG (Multimedia Network  
Graphics) file;

the second graphic information is a PNG (Portable Network  
Graphics) file; and

20 the third graphic information is a JNG (JPEG Network  
Graphics) file.

16. The method of claim 1, wherein the first source is an  
enhanced navigation medium.

25

17. The method of claim 1, wherein the first source is a content server.

18. The method of claim 14, wherein the storage medium is  
5 a temporary storage medium.

19. The method of claim 1, wherein the first source is an interactive digital versatile disc (I-DVD).

10 20. The method of claim 1, wherein and the first graphic information comprises MNG (Multimedia Network Graphics), PNG (Portable Network Graphics) and JNG (JPEG Network Graphics) data chunks.

15 21. The method of claim 20, wherein the MNG data chunk comprises MNG header information and MNG end information, and control information for reproducing animated images.

22. The method of claim 20, wherein the PNG data chunk  
20 comprises PNG header information, PNG end information, object image data, and control information for controlling playback of the object image data.

23. The method of claim 20, wherein the JNG data chunk  
25 comprises JNG header information, JNG end information, JPEG image

data, and control information for controlling playback of the JPEG image data.

24. The method of claim 23, wherein the JPEG image data  
5 comprises multidimensional density attributes for defining aspect/ratio conversions for image data displayed on a display device, based on the display device dimensions.

25. The method of claim 24, wherein the multidimensional  
10 density attributes comprise a horizontal pixel density X.

26. The method of claim 24, wherein the multidimensional density attributes comprise a vertical pixel density Y.

15 27. An enhanced navigation player for reproducing animation data, the player comprising:

a first decoder for receiving first graphic information comprising control data and animation data associated with audio/video (A/V) data read from a first source;

20 a second decoder for extracting second graphic information in form of first decoded image data from the first graphic information;

a parser for extracting third graphic information in form of second image data from the first graphic information;

25 a third decoder for decoding the third graphic information

into second decoded image data; and

an image manager for receiving the first and second decoded image data and reproducing animated images, based on the control data.

5

28. The player of claim 27, wherein the first decoder, the second decoder and the parser, respectively extract first, second and third control information from respectively the first, second and third graphic information.

10

29. The player of claim 27 wherein the first control data comprises MNG (Multimedia Network Graphics) control information, the second control data comprises PNG (Portable Network Graphics) control information, and the third control data  
15 comprises JNG (JPEG Network Graphics) control information.

30. The player of claim 27, wherein:

the first graphic information is a MNG (Multimedia Network Graphics) file;

20 the second graphic information is a PNG (Portable Network Graphics) file; and

the third graphic information is a JNG (JPEG Network Graphics) file.

25 31. The player of claim 27, wherein the first source is

an enhanced navigation medium.

32. The player of claim 27, wherein the first source is a content server.

5

34. The player of claim 27, further comprising a storage medium for temporarily storing first graphic information received by the first decoder.

10 35. The player of claim 27, wherein the first source is an interactive digital versatile disc (I-DVD).

36. The player of claim 27, wherein the first graphic information comprises MNG (Multimedia Network Graphics), PNG  
15 (Portable Network Graphics) and JNG (JPEG Network Graphics) data chunks.

37. The player of claim 36, wherein the MNG data chunk comprises MNG header information and MNG end information, and  
20 control information for reproducing animated images.

38. The player of claim 36, wherein the PNG data chunk comprises PNG header information, PNG end information, object image data, and control information for controlling playback of  
25 the object image data.

39. The player of claim 36, wherein the JNG data chunk comprises JNG header information, JNG end information, JPEG image data, and control information for controlling playback of the JPEG  
5 image data.

40. The method of claim 39, wherein the JPEG image data comprises multidimensional density attributes for defining aspect/ratio conversions for image data displayed on a display  
10 device, based on the display device dimensions.

41. An enhanced navigation player for reproducing animation data, the player comprising:

a MNG decoder for receiving MNG graphic information  
15 comprising control data and animation data associated with audio/video (A/V) data read from at least one of an enhanced navigation medium and a content server;

a PNG decoder for extracting PNG graphic information in form of first decoded image data from the first graphic  
20 information;

a JNG parser for extracting JNG graphic information in form of JPEG image data from the MNG graphic information;

a JPEG decoder for decoding the JNG graphic information into second decoded image data; and

25 a MNG layout manager for receiving the first and second

decoded image data and reproducing animated images, based on the control data.

42. The player of claim 41, wherein the MNG decoder, the  
5 PNG decoder and the JNG parser, respectively extract MNG, PNG  
and JNG control information from respectively the MNG, PNG and  
JNG graphic information.

43. An enhanced navigation medium comprising:  
10 audio/visual (A/V) data;  
navigation data for controlling reproduction of the A/V  
data by an enhanced navigation player; and  
structural configuration for packaging the A/V and control  
data, wherein the structural configuration comprises a data  
15 frame comprising an MNG (Multimedia Network Graphics) file having  
animation information.

44. The enhanced navigation medium of claim 43, wherein  
the MNG file comprises:  
20 MNG chunk data; and  
at least one of PNG (Portable Network Graphics) chunk data  
and JNG (JPEG Network Graphics) chunk data.

45. The enhanced navigation medium of claim 44, wherein  
25 the MNG chunk data comprises:

a MNG header frame identifier;  
a MNG end frame identifier; and  
MNG control information.

5        46.    An enhanced navigation data structure for packaging  
animation data for reproduction by an enhanced navigation  
player, the data structure comprising an MNG file comprising:

a audio/visual (A/V) data;  
navigation data for controlling reproduction of the A/V

10 data by an enhanced navigation player.

47.    The enhanced navigation data structure of 46,  
wherein the A/V data and the navigation data are packaged into  
MNG (Multimedia Network Graphics) chunk data; and at least one  
15 of PNG (Portable Network Graphics) chunk data and JNG (JPEG  
Network Graphics) chunk data.

48.    The enhanced navigation data structure of claim 47,  
wherein the MNG chunk data comprises:

20        a MNG header frame identifier;  
a MNG end frame identifier; and  
MNG control information.

49.    The enhanced navigation data structure of claim 47,  
25 wherein the PNG chunk data comprises:

a PNG header frame identifier;  
a PNG end frame identifier; and  
PNG control information.

5        50.    The enhanced navigation data structure of claim 47,  
wherein the JNG chunk data comprises:

a JNG header frame identifier;  
a JNG end frame identifier; and  
JNG control information.

10
